

OFFICIAL MASSAR DESIGNATION: G.S. Al Jabr wa Al Handassa I	SCHOOL TYPE: Private, urban, exam-based admission	HEAD OF SCHOOL: Mr. Alami	CEEBC CODE: Not assigned
MIDYEAR GRADES: Available by approximately January 31	ACADEMIC CALENDAR: September-June; two semesters	LANGUAGE PROGRAM: Moroccan national curriculum, Option Français	

SCHOOL OVERVIEW

Founded in 2002, Groupe Scolaire Al Jabr serves students from preschool through the final year of secondary school. Its lycée is widely regarded as a leading private school in Fès and is academically strong within Morocco, particularly in the scientific Baccalaureate pathways. The school draws students from across Fès and serves predominantly middle-income families, spanning lower-middle-income to relatively affluent households. It does not formally collect U.S.-style demographic, first-generation, citizenship, or income data.

810 Approx. lycée enrollment	Approx. 270 Students per lycée grade	Approx. 270 Graduating class	31-36 Typical class size
Six days Weekly schedule	Practically all graduates Postsecondary continuation	Entrance assessment Admission	No dedicated counselor School counselor

SECONDARY-SCHOOL STRUCTURE

U.S. equivalent	Moroccan level	Programs offered at Al Jabr
Grade 10	Tronc Commun	Tronc Commun Scientifique
Grade 11	1ère année Baccalauréat	Sciences Mathématiques; Sciences Expérimentales
Grade 12	2ème année Baccalauréat	Sciences Mathématiques B; Sciences Physiques

CURRICULUM AND ACADEMIC RIGOR

The lycée offers only scientific pathways. Students within the same track follow an identical nationally prescribed program; there are no electives, honors-designated courses, AP, IB, dual enrollment, university-level courses, or independent-study credit. Track selection reflects student preference, academic performance, and school guidance. Strong quantitative students are generally encouraged toward Sciences Mathématiques.

In the Option Français, mathematics and scientific subjects are taught in French, humanities primarily in Arabic, and English in English. Sciences Mathématiques B is the highest-rigor curriculum available at Al Jabr. It combines advanced mathematics and physics with Engineering Sciences and is characterized by a heavier quantitative workload and a particularly strong student cohort. Students attend school six days per week. 1ère Bac students complete approximately 36 hours of instruction weekly, including additional school hours beyond the national timetable; 2ème Bac students complete approximately 30 hours. Weekend homework is common. Assessment is continuous, and the school provides Baccalaureate preparation, mock examinations, and preparation for selective Moroccan postsecondary entrance examinations.

GRADING AND ASSESSMENT

Mark	National classification	Interpretation
16.00-20.00	Très Bien	Very Good
14.00-15.99	Bien	Good
12.00-13.99	Assez Bien	Quite Satisfactory
10.00-11.99	Passable	Satisfactory
Below 10.00	Insuffisant	Unsatisfactory / failing

Al Jabr reports a weighted moyenne générale on Morocco's 0-20 scale; 10 is the minimum passing mark. Subject coefficients vary nationally by grade and track, so advanced Mathematics and Physics-Chemistry carry substantially more weight than lower-coefficient subjects. The school does not report a 4.0 GPA, official class rank, or percentile. A school official may provide a contextual standing estimate when needed, but it is not an institutional rank. Marks should not be converted mechanically into U.S. percentages.

FINAL MOROCCAN BACCALAUREATE AVERAGE

25% regional examination (end of 1ère Bac) + 25% 2ème Bac continuous assessment + 50% national examination (end of 2ème Bac)

REQUIRED COURSE SEQUENCE

Level	Required program	Key progression
Tronc Commun Scientifique	Arabic, French, English, Mathematics, Physics-Chemistry, Life and Earth Sciences, History-Geography, Islamic Education, Philosophy, Informatics, Physical Education	Scientific foundation; Informatics included
1ère Bac Sciences Mathématiques	Arabic, French, English, Mathematics, Physics-Chemistry, Life and Earth Sciences, History-Geography, Islamic Education, Philosophy, Physical Education	Informatics ends; major mathematics weighting
2ème Bac Sciences Mathématiques B	Arabic, French, English, Mathematics, Physics-Chemistry, Engineering Sciences, Islamic Education, Philosophy, Physical Education	Engineering Sciences replaces Life and Earth Sciences; History-Geography ends

SCHOOL-SPECIFIC GRADE CONTEXT

Internal examinations are generally comparable in difficulty to the Moroccan regional and national examinations and may be slightly more demanding in some subjects. Grading is strict and based primarily on supervised examinations. Most subjects have two major assessments per semester; Mathematics and Physics-Chemistry generally have more. Assignments, participation, practical work, or classroom conduct may also contribute. Grades are not formally standardized across teachers.

Average	1ère Bac context	2ème Bac context
17/20	Strong performance	Very strong performance
18/20	Excellent; earned by several high performers	Rare and excellent
19/20	Rare	Exceptionally rare

2026 BACCALAUREATE RESULTS

100%	Pass rate	73.56%	Sciences Physiques: Bien or Très Bien
72.34%	Sciences Mathématiques B: Bien or Très Bien	19.34/20	Highest SMB national-exam score
19.09/20	Highest Sciences Physiques national-exam score	Approx. 18.9/20	Highest final averages in both tracks

These outcomes are broadly consistent with the school's strong Baccalaureate performance in recent graduating classes.

STUDENT OPPORTUNITIES

- VEX Robotics (fee-based)
- LEO service activities
- Public-speaking activities
- Tutoring initiatives and other student-led clubs
- Participation in regional and national academic competitions

Opportunities beyond the national curriculum do not carry academic credit. The school has computer rooms and internet access but no broad research infrastructure, independent-study program, or substantial interscholastic sports program.

POSTSECONDARY GUIDANCE AND OUTCOMES

Al Jabr does not employ a dedicated college counselor. Guidance primarily concerns Moroccan and French pathways. Applications to English-speaking universities are uncommon; when pursued, a designated faculty member coordinates school documents and application procedures.

- Practically all graduates continue to higher education
- Common destinations: CPGE, selective Moroccan engineering and professional schools, medical studies, Moroccan universities, and French institutions
- Approximately 5-10 students per year pursue destinations outside Morocco and France
- Enrollment at U.S. universities is rare; the Common App is not a routine school process

NOTES FOR TRANSCRIPT INTERPRETATION

The Massar transcript reports semester subject averages, subject coefficients, attendance and conduct, and the weighted moyenne générale. The final Baccalaureate credential requires completion of 2ème Bac and a passing national result; Al Jabr imposes no additional school-specific graduation requirement.
